# CONVERSION OF RAILWAY FREIGHT TRAFFIC, 1961 TO STANDARD COMMODITY CLASSIFICATION

## INTRODUCTION

Revenue freight traffic statistics for 1961, published earlier in conformity with the "Canadian Freight Commodity Statistics Classification", are summarized herein on the basis of the revised "Standard Commodity Classification" of the Dominion Bureau of Statistics. This supplement, which shows Canada totals only, will enable comparisons with freight movements by other modes of transport as well as with other commodity data now being released by the Dominion Bureau of Statistics in accordance with the Standard Classification.

Under the Standard Classification structure commodities are grouped into five main sections and are classified mainly on the basis of "chief component materials" and "purpose" rather than "origin". The five sections are: I. Live Animals; II. Food, Feed, Beverages and Tobacco; III. Crude Materials, Inedible; IV. Fabricated Materials, Inedible; and V. End Products, Inedible.

In converting Canadian Freight Commodity Statistics Classification data to the Standard system it was found that many of the reporting classes were directly comparable and that it was possible to relate others by combining two or more items. Only a small percentage of categories (representing approximately 4 per cent of the total tonnage) could not be readily converted. These items are shown separately at the end of the table under the heading, "Miscellaneous".

### Traffic

Crude materials inedible, which includes raw products and those that have been subjected to preliminary processing merely for cleaning or ease in shipping, accounted for 68.9 million tons or 45.3 per cent of all rail movements in 1961. This compared with 73.8 million tons or 46.9 per cent of the previous year total. Of the 1961 volume carried by the twenty-two reporting roads 63.2 million tons

were loaded in Canada, while 4.3 million tons were received from United States rail connections for delivery in Canada. Intransit or overhead traffic (U.S. to U.S. through Canada) totalled 1.4 million tons.

Fabricated materials, the second largest group, made up 26.4 per cent of the overall rail tonnage handled in 1961 (26.3 per cent in 1960). Comprising this group are materials which have undergone processing to some degree but which will be further involved in more complicated industrial processes before reaching the form in which their end use is served. Rail movements of fabricated materials aggregated 40.1 million tons in 1961 compared with 41.3 million tons a year earlier. Loadings during the year under review totalled 31.1 million tons while receipts destined to domestic and U.S. points totalled 2.5 and 4.4 million tons, respectively.

Food, feed, beverages and tobacco accounted for 21.0 per cent of all rail freight with 32.0 million tons carried in 1961 as against 30.9 million tons a year earlier. Of the 1961 total, 26.3 million tons were domestic loadings while 5.8 million tons were received from the U.S., either for delivery in Canada or intransit to a U.S. point.

End products, which consist of articles rather than materials, totalled 4.0 million tons (4.6 in 1960) and the volume of live animals aggregated 0.4 million tons (0.4 also in 1960).

Other commodities, which were not directly convertible and are shown under the heading "miscellaneous", accounted for 5.4 million tons of rail freight in 1961 (5.1 million tons the previous year) and less-than-carload lots (l.c.l.), which could not be classified according to the Standard Commodity Classification, totalled 1.2 million tons, down slightly from 1.3 million tons in 1960.

Revenue Freight Carried by Railways, 1961 - Canada

<sup>1</sup> Includes fur-bearing and other live animals, n.e.s.

<sup>2</sup> Includes commodities which are not assembled on the same basis in both classifications and therefore cannot be made comparable, e.g. the first five classes listed represent three different Standard Commodity Classification sections but are all contained under one such group in the Freight Commodity Classification.

# APPENDIX

**Note:** Due to space limitations, it has been necessary to employ a shortened adaptation of the Standard Commodity Classification codes throughout this publication. Presented on the following pages is a list of these numbers along with the actual S.C.C. equivalents.
